# Bruise Vanish

Bruises (contusions) develop when small blood vessels under the skin tear or rupture, most often from a bump or fall. Blood leaks into tissues under the skin and causes the bluish, reddish, or blackish mark. Some people bruise easily, some have tougher skin.

Bruises are more common in older people whose skin is thinning with aging. This is due to collagen, the connective that cushions the skin, breaks down leaving underlying blood vessels more vulnerable. People who take medications for diseases, including blood thinners like aspirin, also have an increased risk for bruising.

As a rule, most bruises are not a cause for concern and will go away on their own. However, treatment with **Bruise Vanish** may speed healing and relieve the swelling and soreness that often accompanies bruises that are caused by injury.

## FEATURES & BENEFITS OF Bruise Vanish:

- Increases circulation in and around the area
- Helps resolve black and blue marks
- Minimizes appearance of broken blood vessels
- Improves look of bruise-like blotches and skin discolorations
- Improves appearance of scars & Stretch Marks

## ALL NATURAL ACTIVE INGREDIENTS:

**Arnica Montana:** An herb that grows wild in the Swiss Alps and has been used as a part of European herbal medicine for over a thousand years for the reduction of bruising and swelling and to shorten the recovery period after physical trauma.

**Hypericum:** A flowering plant known for its superior wound healing, antibacterial activity, and anti-inflammatory action.

**Ledum:** An herb that acts like a combination of Arnica and Hypericum. Especially for black eyes (the #1 remedy) and for bruises when they have turned violet-blue-black. It has an equally great effect on puncture wounds (which do not bleed long) caused by a sharp instrument. The pains relieved by Ledum are improved by cold compresses and cold water in general.

**Bellis Perrenis:** A plant used for the temporary relief of minor aches and pains due to sore muscles and joints, sprains, and bruises.

**Symphytum:** Commonly known as Comfrey. Comfrey leaves and roots are used topically to treat wounds, arthritis, sprains, and broken bones. In these applications, allantoin is believed to be the effective compound.
