

META-GEN SM-10

Intensive Stretch Mark Complex

Some people are just more prone to getting stretch marks due to their genetic makeup and the amount of available elastin in their skin.

Stretch marks are essentially dermal scar tissue. The processes necessary to produce positive change in most types of scar tissue are reasonably consistent. Consequently, the biomechanical stimuli, which are produced by **META-GEN SM-10** are compatible for the effective treatment of all types of scar tissue including, but not limited to, stretch marks and surgical scars.

While newer stretch marks tend to be red in color, older stretch marks tend to be silver/white, their contrast to the surrounding skin is, therefore, not as dramatic. Accordingly, older stretch marks respond quite well as they can blend more easily into the surrounding tissue as the treatment progresses.

META-GEN SM-10 is effective on all stretch marks regardless of their cause.

Results can vary depending on the severity of your stretch marks and your lifestyle. For example, general health habits such as smoking, alcohol intake or excessive sunbathing are inherently harmful to your skin and can deter the effectiveness of the treatment. However, when used as directed, most users will see visible improvement within 2 to 3 weeks. As always, individual results will vary and some users may require additional time before observing any positive change.

META-GEN SM-10 works at the cellular level, rejuvenating and renewing the skin. Results that are attained during the treatment of existing striae will not reverse once use of the product is discontinued. However, **META-GEN SM-10** will also help to prevent the occurrence of new stretch marks by supplementing the structural proteins that provide strength and flexibility to the skin. Assuming that one engages in such activities known to promote striae occurrences i.e., weight gain, bodybuilding, etc., discontinuing the use of **META-GEN SM-10** will allow your skin to continue to age in its usual manner, eventually returning the skin to its original proclivity for dermal tearing (stretch marks).

Try to avoid applying tanning lotions or other skin care products prior to the application of **META-GEN SM-10**. This will inhibit the absorption of **META-GEN SM-10** into the skin, significantly reducing its effectiveness.

META-GEN SM-10 may be applied anywhere on the body where stretch marks occur or where dermal improvement is desired. Typical female areas include the abdomen, thighs, hips and

breasts. Typical male areas also include the abdomen, thighs, and hips however; bodybuilders tend to present striae in the chest, shoulders and biceps as well. **META-GEN SM-10** should not be applied directly on the nipple or areola.

META-GEN SM-10 should be applied 2 to 3 times daily on clean, dry skin utilizing a firm circular motion until the cream is completely absorbed (usually about 30 seconds).

META-GEN SM-10 was specifically profiled and formulated to treat stretch marks. However, the bioactive mechanisms by which positive change is affected on striae scar tissue and those which produce positive change on wrinkled skin are very consistent. Accordingly, **META-GEN SM-10** may also be applied on the facial wrinkles.

Ingredients: De-ionized Water, Glycerol Monostearate/Peg-100 Stearate, Isopropyl Palmitate, Stearic Acid, Cetyl Alcohol, Copper Peptide, Collagen Amino Acid, Elastin, Fruits Acid, Vitamin A, Vitamin C, Vitamin D, Carbomer, Citric Acid, Grape Fruit Extract.
