24 / 7 Pure HOODIA 2000

**As Seen On CBS 60 Minutes!!!
Appetite Suppressant Formula**

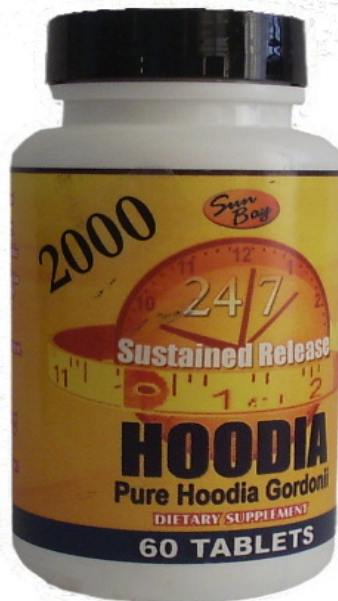

Hoodia Gordonii:

is a leafless, spiky succulent grown naturally in South Africa. There are 46 species of Hoodia and only 2 that contain the appetite suppressant qualities that people seek. Hoodia, is registered as a protected species by the South African Nature Conservation and certain farmers are granted a special permit that allows them to commercially grow and harvest the plant for sale to the consumer market. This plant is now being grown in sustainable quantities and has become widely known for its effects as an appetite suppressant.

For many generations the nomadic SAN tribe's people of the region have used the Hoodia Gordonii plant to suppress appetite and thirst during long hunting trips of several days duration. Although there are over 20 species in the Hoodia family only the Hoodia Gordonii plant contains a natural appetite suppressant. It was not possible to patent a naturally growing plant, so the SAN tribes people sold the 'traditional knowledge' rights to develop a drug based on the new molecule contained within Hoodia Gordonii to a UK based firm called Phytopharm

Research :

Phytopharm researched the new molecule, which they called P57, and sold the commercial development rights onto the pharmaceutical giant, Pfizer. During clinical trials of the pure dried Hoodia Gordonii powder, it was discovered that the P57 molecule could reduce the appetite by up to 2,000 calories a day. The P57 molecule within Hoodia Gordonii is almost 10,000 times stronger than glucose and works by fooling the body into believing it is full when little or no food has actually been eaten.

Ingredients:

1000 mg of pure Hoodia Gordonii Cactus per tablet.
